D-STAR Communication with Digital Clear Voice and Data

DR (D-STAR Repeater) Function

Access Point Mode and Terminal Mode Expand D-STAR Coverage

New modes in the ID-51A PLUS2 enable you to make Gateway calls through a PC (Windows®) or an Android™ device, even from areas where no D-STAR repeater is accessible.

Access Point Mode

Use the ID-51A radio connected to the Internet through a PC (Windows®) or Android™ device*, as an Access point. You can use another D-STAR radio to send your voice and/or data through the Access point radio.

Access point mode example

* An optional free download software, RS-MS3W is required to be installed in the PC. An optional free download application, RS-MS3A is required to be installed in the Android™ device.

Terminal Mode

Connect the ID-51A to the Internet through a PC (Windows®) or Android™ device*, and send your voice and/or data through the Internet gateway to a destination repeater.

Terminal mode example

Integrated GPS, Dualwatch, AM/FM Receiver, IPX7 Submersible and More

Integrated GPS Receiver

Shows your current position and altitude on the display, and offers a position reporting function, in the DV mode. When receiving a call addressed to your call sign, the ID-51A can automatically send your current position information*. Between ID-51A's communication, replied position information can pop up on the caller's display. Using the integrated GPS** and repeater memories, the ID-51A searches for nearby DV or analog FM repeaters.

* Function not available on all D-STAR networks.

** To use the Repeater Search function, the position data of the repeater is required. The ID-51A will be shipped with D-STAR repeater memories preprogrammed, but the position data of some D-STAR repeaters may not be entered or exact.

Independent AM/FM Receiver

FM and AM broadcast stations can be listened to while using the dualwatch function. When an amateur radio band signal is received, the broadcast station is automatically muted.

Broadcast radio example

Other Functions

- Compact and lightweight
- 5 W output power
- 4.5 hour long lasting battery life with the BP-271**
- Free download CS-51PLUS2 cloning soft for editing various memory settings with a PC
- A total of 1304 memory channels, including 750 D-STAR repeater memories
- CTCSS/DTCS code squelch with split tone function
- Automatic repeater function** automatically turns on/off duplex operation and tone encoder
- 16 DTMF memory channels (24 digits)
- Optional CT-17, CI-V level converter for remote radio control
- Squelch release function to monitor a weak signal
- External DC power jack
- Earphone cord antenna for FM broadcast receiving
- LCD and keypad backlighting
- Weather channels and VHF air band and other utility communication can be listened to**
- Priority watch
- High speed cloning
- Auto power save
- Auto power off
- Clock function
- Key lock function

** Typical operation with 1:1.8 duty cycle in DV mode. (Power save ON.)

** USA, Korea and Export version only

** Weather channels are available for USA version only. See specifications page for receiver range details.

Voice Memory Function*

The QSO recorder function records incoming and outgoing calls. The voice recorder function can record an off-line conversation. The recorded voice message can be repeatedly transmitted. (Up to 60 seconds x 1 channel)

Voice recorder example

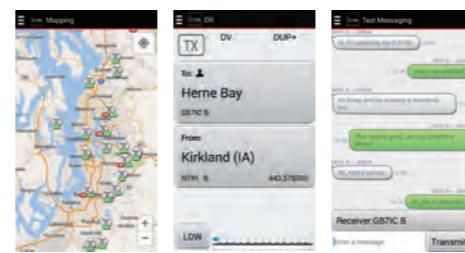

* microSD card required.

Enhanced Digital Data Communication with Android™ Devices

RS-MS1A, Remote Control Application for Android™

The RS-MS1A enables you to control the ID-51A* with your Android™ device. You can see the location of repeater sites on a map application and set them to the ID-51A. In addition, text messages and pictures can be sent and received with your Android™ device.

* The OPC-2350LU data cable is required to connect to an Android™ device. Note: Please check the system requirements on the Google Play™ RS-MS1A page before installing the application.

DV Fast Data Mode*

By using data in place of voice frames, the ID-51A transfers data 3.5 times faster (3480 bps) than in the conventional DV mode (with voice). Pictures taken by an Android™ device can be quickly transmitted in the DV Fast Data mode.

* The DV Fast Data mode is not compatible with the DV mode low-speed data communication.

Conventional low-speed data mode
950 bps
DV Fast Data Mode
3480 bps

Received position information example

V/V, U/U, V/U Dualwatch

The dualwatch function can monitor VHF/VHF, UHF/UHF or VHF/UHF bands simultaneously*. The audio and squelch levels can be set separately for the main and sub-bands.

V/U Dualwatch example

* DV/DV, AM/AM, FM-N/FM-N and DV/FM-N mode Dualwatch not available.

microSD Card Slot

When used with a microSD card (Up to 32 GB), you can store various content including voice memory, DV auto reply message, TX voice message, QSO log, RX history log and GPS log data. Memory channels, D-STAR repeater memories and other personal settings can be saved to the microSD card, and can be loaded into the ID-51A radio.

IPX7 submersible construction (1 m depth of water for 30 minutes)

Function Comparison Chart

	RS-MS1A	Repeater search function	DV fast data mode	Terminal mode	Access point mode
ID-51A PLUS2	Yes	Yes (DV/FM repeater)	Yes	Yes	Yes
ID-51A PLUS	Yes	Yes (DV/FM repeater)	Yes	-	-*
ID-51A	Yes (Limited functions)	Yes (DV repeater)	-	-	-*

* ID-51A and ID-51A PLUS can transmit voice and/or data through the Access point, but can not be used as an Access point.

Note for the Terminal mode and Access point mode:

- An Internet IP connection is necessary for a PC (Windows®) or Android™ device. (Either a dynamic or static IP address can be used.)
- Before you set up the Access point, check any regulations or laws in your country.
- Only one D-STAR transceiver can transmit through an Access point at a time.
- For Access point or Terminal mode operation, you must register your MY and Access point call signs with a Gateway repeater/server that has the RS-RP3C installed.
